

Advanced 2-Day

Alpesh Tailor

Our Data Local v Cloud

The core data is stored as Excel (.xls) in a folder

Local Drive

This folder can be on a **local drive**, however the data updates/refreshes will need to be handled **manually**

Local PC

Cloud Drive

If the folder is stored on a **cloud drive**, e.g. SharePoint | Business OneDrive | AWS | iCloud etc then updates/refreshes can be **scheduled** via Power BI (Pro or Premium)

SharePoint
One-Drive
AWS etc

Update Types

Updates may be **Overwritten** or **Appended**

Do you wish to **overwrite** the Excel file every time or **append** to it?

Overwrite

This same file is **overwritten** each day/week/month

Append

Each day/week/month a new file is **added/appended** to the source folder

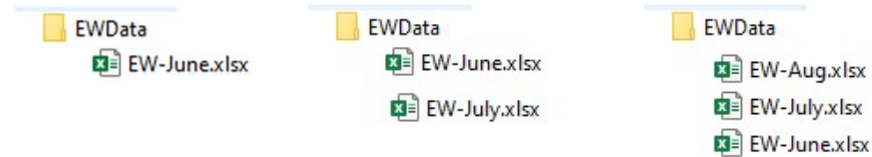

Our Data Architecture

Each month an **additional** .xlsx file is added

Power BI can **Append** the new data to the existing data table via M-Code steps

36	25	Phyllis All	26-Nov-73	Single	Female	08-Jan
37	26	Marvin All	04-Feb-72	Married	Male	05-Jan

	A	B
1	EmployeeID	Training Budget
2	1	9500

Data Modelling

Data Modelling – Three Relationship Types

1. **One to One**
2. **One to Many**
3. **Many to Many** *(ideally Power BI prefers One to Many) as this mean less joins -> less processing*

A	B
EmployeeID	Training Budget
1	9500
2	8150
3	11000
4	8550
5	6325
6	15250
7	9800
8	16500
9	7000
10	10900
11	5500

Workshops that Employees attended

Our Data Model

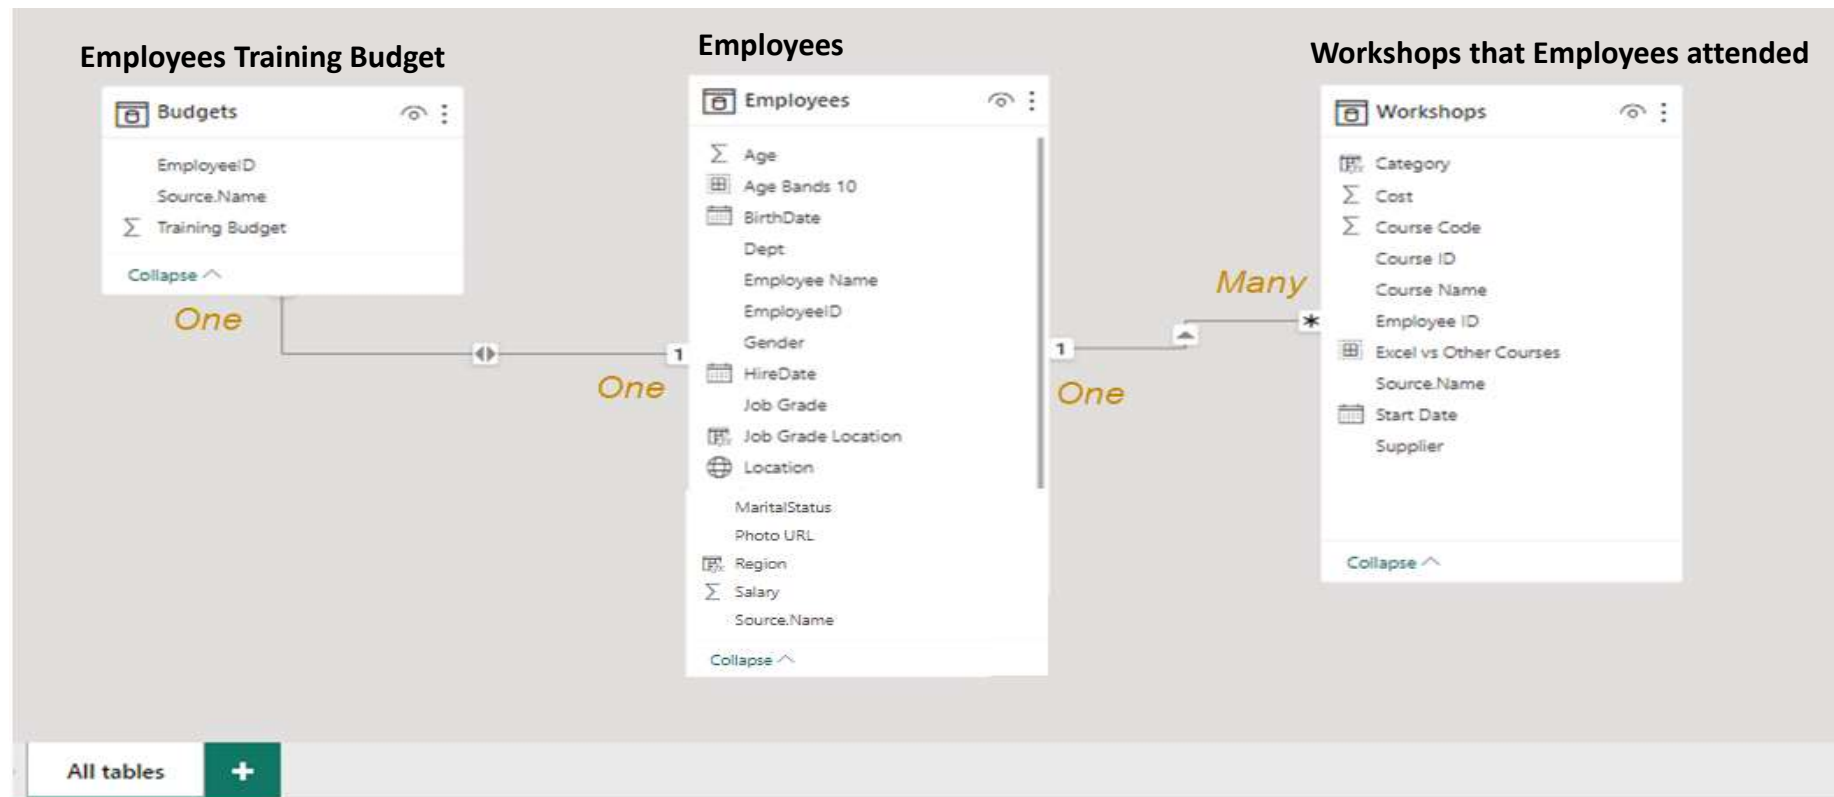

Simpler is better

TIP: Power BI prefers One to Many) as this mean less joins

Performance

Ease of Use

Minimized Risk of Errors

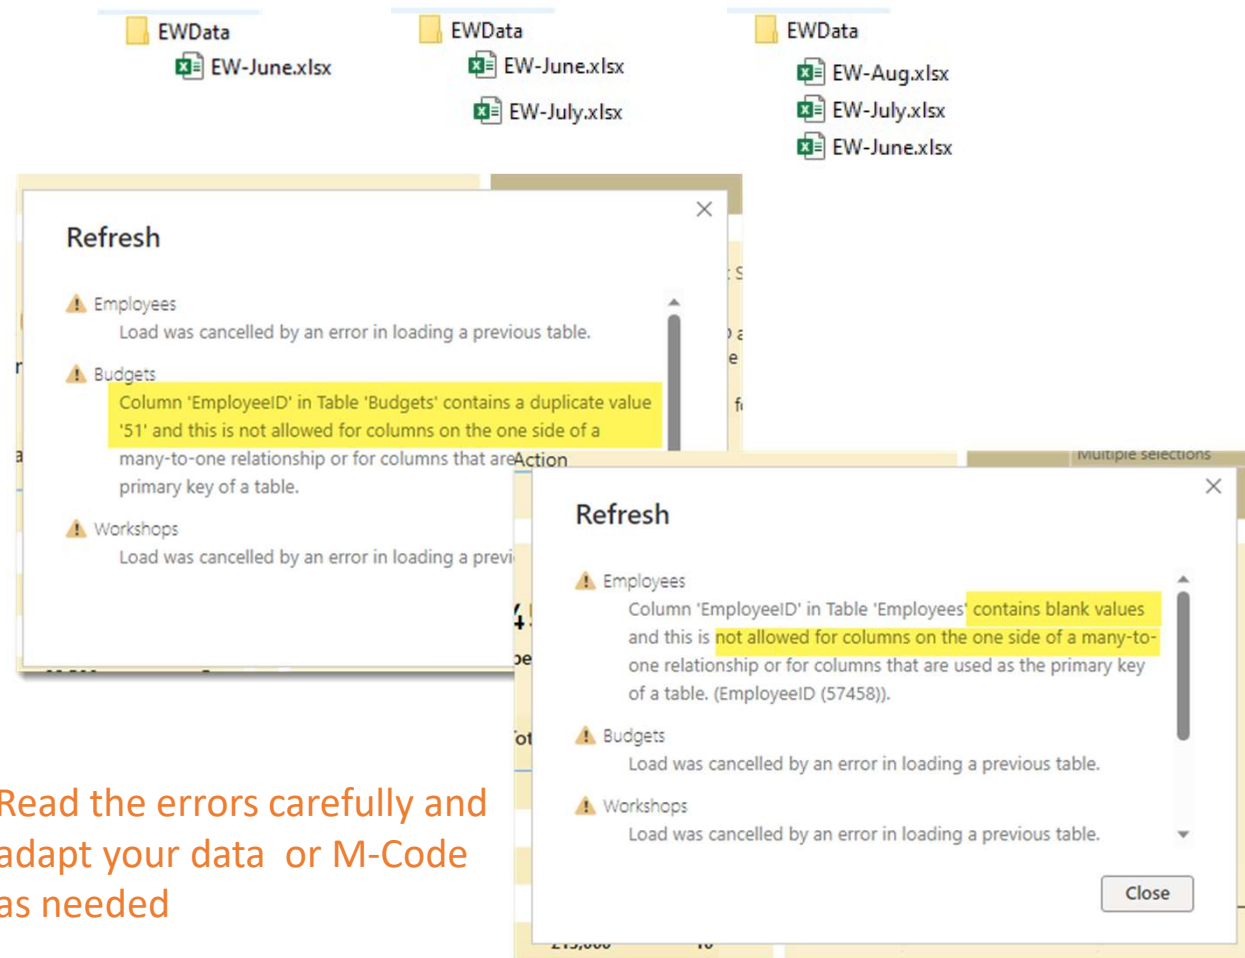

Testing Data Refreshing

Add an **additional** .xlsx file to the EWData folder

Check that the import is successful

Read the errors carefully and adapt your data or M-Code as needed

Updates Success!
